

OBJECTION
RUNTIME
MOBILE
EXPLORATION
GIT.IO/OBJECTION

What is it

- Runtime mobile app hacking tool
- Written in Python 3
- Built on top of Frida
- Does not require root / jailbreak
- Supports iOS & Android

Major features

- Filesystem Interactions
- Keychain / KeyStore dumping
- Easily bypass SSL pinning
- Quickly hook methods and dump arguments
- Many platform specific enumeration modules
- And much more!

How to get it

```
$ pip3 install objection
```

How to use it

- Patch a target application
- Connect objection
- iOS applications without Fairplay DRM can be patched
- Or, if you do have a rooted / jailbroken phone, just start *frida-server*.
